MAD LIBS #1

A Day in the Life of a Public Health Legend

Somewhere between the past and the present, three public health legends decided to team up for one (adjective) _____ day at the lab.

Marie Curie arrived first, and immediately got to work (verb ending in -ing) _____ over a set of (lab equipment plural) _____ she insisted were more (adjective) _____ than anything in her old Paris lab, all (number) _____ of them lined up in a neat row.

"In science, we must not forget that (adjective) _____ facts are made of details," she reminded everyone, spilling a bit of (type of liquid) _____ on her (article of clothing) _____ in the process.

Next came William Hinton, calm and precise, carrying (number) _____ years of expertise and zero patience for sloppy technique. He took one look at the workbench and said, " (silly word) _____! Whoever labeled these tubes needs to (verb) _____ again." Everyone straightened their (plural body part) _____ and got back on task.

Then, bursting through the door completely flat but full of enthusiasm, came Flat Labby, the (adjective) _____ champion of public health everywhere. Labby couldn't run a single test, but made up for it with (adjective) _____ energy, cheering on Marie and William from the sidelines and handing out (plural snack) _____ to anyone who looked tired.

By (time) _____, the trio had inspired the whole lab, proving that whether you're a chemist, a microbiologist, or a public health champion, everyone has a role to play in public health.

Happy Public Health Laboratory Appreciation Month, from all your legends past and present!
